Dear Hiring Manager,

As a QA Leader and Test Automation Architect with over a decade of experience, I bring a unique blend of deep technical expertise, team-building leadership, and a forward-thinking focus on applying AI to transform quality assurance. I've led QA efforts for mission-critical, high-revenue systems, implemented scalable automation strategies from the ground up, and driven impactful quality improvements in both enterprise and startup environments.

In my most recent role at Allergan Aesthetics (AbbVie), I introduced AI-powered tools including GitHub Copilot, Playwright MCP, and KaneAI from LambdaTest to streamline testing and dramatically reduce manual effort. These innovations led to a reduction of regression testing time by over 80% and significantly accelerated release cycles. I also spearheaded QA strategy for mobile apps and platforms driving 90%+ of customer traffic, contributing to a 50% increase in 5-star reviews and a 3x reduction in production defects.

Beyond technical execution, I take pride in building strong, self-sufficient QA teams. At Alluma, I led a transition from a support-based QA team to a full-stack test engineering organization by conducting a multi-month internal coding bootcamp successfully upskilling Manual QA Analysts into SDETs. I've also co-founded an educational startup, TechStart.dev, where I built real-world training platforms and mentored 300+ students into the industry, achieving a 95% employment success rate.

I'm passionate about creating scalable, intelligent, and automation-first QA ecosystems. Whether introducing AI into testing workflows, improving CI/CD infrastructure, or aligning cross-functional teams on quality strategy, I aim to deliver engineering excellence that drives business results.

Thank you for considering my application. I would welcome the opportunity to contribute to your team and further discuss how I can help elevate quality and innovation within your organization.

Sincerely,
Arthur Senko
